Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

y Match Local Similarity hes 13; Conser	denature secondary structures denderious at temperatures migh enough to denature secondary structures. Claim 9; Pages 37-41; 80pp; French. The present sequence encodes a heat stable DNA polymerase from archaebacteria of the genus Pyrococcus sp. GE23. The encoded polymeras has an extremely high heat stability and can catalyse reactions at 70-90 degrees celsius. High molecular weight DNA was isolated from the bacteria, and screened with probes based on the polymerase genes of p. furiosus and Thermococcus litoralis to isolate the present sequence used to produce recombinant DNA encoding the present polymerase are used to produce recombinant DNA which is useful for nucleic acid amplification, including direct, reversed polymerase chain reaction (Pondouble-stranded matrices and PCR on matrices having secondary structures that block the process at conventional elongation temperatures. Specifically, sequences which are clikely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S. aureus infection. The cc polypeptides can also be used in a kit for the immunodetection of cc s. aureus in a sample. S. aureus is implicated in numerous human diseases, cc including cellulitis, eyelid infections, food poisoning, osteomyelitis, cs kin and surgical wound infections, scaled skin syndrome, toxic shock cc syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating computer readable medium.

The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anti-S.aureus vaccines

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cellulitis; eyelid infection; skin infection; surgical wound toxic shock syndrome; ds.
                              The present sequence represents a nucleic acid sequence identified in the course of the invention, and expressed in lung, brain, kidney, heart muscle, liver, placenta, small intestine and activated T-cells. The specification also describes sequences encoding human homologues of the yeast RAD50, the Drosophila Septin-2 and Acyl-COA synthetase. The proteins have immunomodulatory activity. The nucleic acids and proteins can be used to identify activated T-cells in a sample constitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotide(s) and proteins deristored on computer readable medium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Staphylococcus aureus EP-786519-A2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 97-374922/35

Claim 1; Page 2012; 2084pp; English.
A computer readable medium has been developed which has recorded on it a computer readable medium has been developed which has recorded on it genome. The process is colated from the Enterococcus faecalis genome. X12938 to X13919 represent these nucleotide sequences which are primary nucleotide sequences, also known as contigs. The computer-based system can identify fragments of the Enterococcus faecalis genome with commercial importance. The products can be used to detect the presence of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proteins or other compounds having immunomodulatory activity.              T DNA coding for neurotrophic human elk ligand cytokine - useful as probe to isolate other elk ligand sequences

Claim 7; Columns 27-30; 18pp; English.

C The present sequence encodes the human cytokine elk-ligand (elk-L),

C which binds a member of the tyrosine kinase receptor family. Elk-L

C exhibits neurotrophic and neuroprotective properties, and has a calculated mol. wt. 35180 daltons and a pI of 9.006. The elk-L

C cDNA, isolated from a human placental cDNA library, can be radiolabelled and used as a probe for isolating other mammalian

C clk-L cDNA. Elk-L can be used to treat neural tissue disorders, and as a neural culture reagent, while immunogenic fragments of elk-L can be used to generate specific anti-lk-L antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Ma

New DNA encoding ligand for elk tyrosine kinase receptor - also related polypeptides, vectors, antibodies and probes, useful e.g. in studying cell differentiation or growth Claim I; Page 29; 35pp; English.

The sequence is that encoding the elk-L protein able to bind elk, a tyrosine kinase receptor. The DNA may be incorporated into vectors which can used to study the role of elk and its ligands in cell growth and differentiation.

                                                                                                                밁
                                                                                                                                                                                                                     as neuro-protective agent

Claim 7; Columns 27-30; 18pp; English.

The present sequence encodes a human elk ligand (elk-L) protein,

which binds elk, has a calculated molecular weight of 35180 and an

isoelectric point of 9.006. Elk-L is a cytokine that can be used to

test cells for elk expression, measure the biological activity of

celk, purify elk by affinity chromatography and as a neuroprotective

agent to treat diabetic, hereditary and nutritional neuropathies

and neurodegenerative diseases. It may also be added to tissue

cultures to prolong the life of neurons. The elk-L cDNA was

isolated from a human placental cDNA library, and is present as a

CDNA insert in the recombinant vector deposited in strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Ma

Example 3; Columns 27-30; 18pp; English.

This is the nucleotide sequence encoding the human elk-L protein, a new cytokine that is the ligand for the elk tyrosine kinase receptor. The extracellular domain of the protein (amino acids 1-213) is used to generate a fusion protein comprising the Fc polypeptide of the human immunoglobulin Gl (extending from the hinge region to the C-terminus). The fusion protein (which has the same activities as the natural elk-L protein) has neuroprotective and neurotrophic activity so is potentially useful for treating a wide range of neurological diseases.

The present sequence encodes human elk-L (elk ligand). The present invention describes antibodies to elk-L polypeptides. The elk-L protein is known to be neuroprotective exhibiting its effect through a trophic mechanism. Examples of diseases that may be treated with elk-L include neuropathies e.g. diabetic, hereditary and nutritional neuropathies, neurodegenerative diseases and other diseases characterised by loss of function or degeneration of neurons.

The DNA can be used for controlling cellulose synthesis in a cell by introducing the DNA into the cell, expressing RNA with a nucleotide sequence homologous to the DNA or a nucleotide sequence complementary to the DNA. The cells are prokaryotic cells i.e. acetobacterium and/or eukaryotic cells such a yeasts i.e. Saccharomyces spp., plant cells (cotton plants) and cultured cells for the control of the control of the cells i.e. acetobacterium cells (cotton plants) and cultured cells for the cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells for the cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells (cotton plants) and cultured cells i.e. saccharomyces spp., plant cells i.e. saccha

increasing starch content of plants, esp. potato and tomato - by introducing into genome a gene for ADP-glucose pyro-phosphorylase activity, fused to plastid transit gene

Bisclosure; Fig 5; 120pp; English.

The inventors claim a method for inc. the starch content of a plant by inc. its ADP glucose pyrophosphorylase (ADPGPP) activity. The method uses a recombinant DNA molecule encoding a fusion protein of amino-terminal plastid transit peptide and ADPGPP. The ADPGPP gene is the glg gene of E. coli Kl2, or its mutant form glg C16 (which causes accumulation of more glycogen and has higher affinity for ADP glucose in the absence of an activator). A pref. plastid transit peptide, designated CTP1, is derived from the sakubisco la gene of from the nopaline synthase (NOS) gene.

This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic clarer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for the production of antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (HUMA-) HUMAN GENOME SCI INC.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 48-50; 72pp; English.

Chapter App-glucose-pyrophosphorylase (ADPGPP) small subunit gene (given in Q80085) was assembled by addition of sequences from the 1st exon of the genomic clone with a nearly full-length cDNA of the same gene. The primers given in Q80087-89 were used to: introduce a BgIII+NCOI site at the ATG codon to facilitate cloning into E. coll and plant expression cy vectors; to introduce a Saci 3' cloning site at the stop codon; and to remove an internal BgIII site. The assembled gene was expressed in E. coll from the recA promoter in a PrecA-gene10L cassette. An initiating ATG codon was placed using the primer given in Q80090 to express the mature gene.

The sequence represents a potato tuber ADP-glucose-pyrophosphorylase small subunit gene. The gene is modified by site-directed mutagenesis to include a BglII-NcoI site at the ATG codon, a SacI site at the stop codon, and an internal BglII site is removed. A methionine initiation codon is internal BglII site is removed. A methionine initiation codon is introduced for expression of the mature protein in Escherichia coli. The gene is cloned together with the large subunit gene (994439) (on compatible plasmids), and subjected to mutagenesis to give improved variants of the enzyme. The resulting variant genes may be expressed in an oilseed crop plant to reduce the oil content in seeds, for use in feedstuff and food recolute.
                                                                                                                                                                                                                                                                                            27-NOV-1996 (first entry)

A 6 kb genomic DNA KpnI fragment containing an open reading frame (ORF) coding for dihydroxy-acid dehydratase was isolated from Brevibacterium flavum MJ-233. The sequence of the 1836 bp ORF was determined (i.e. the present sequence) and was found to encode a protein of 612 amino acids. The enzyme is involved in biosynthesis of the amino acids isoleucine and valine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     greenhouse grown plants. Complementary DNA was synthesized from mRNA using a 3' anchored poly(dT) primer. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by digestion with EcoRI and HindIII. The cDNA fragments were directionally cloned into the EcoRI-HindIII restriction site of the pT7T3-Pac vector. The ligated cDNA fragments were transformed into DH10B host cells (Gibco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BRL).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized pineal glands library cDNA Library Preparation: M.B. soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. The following repetitive elements were found in this cDNA sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AI845473 338 bp mRNA EST 15-JUL-1999

The sequence tag present in the cDNA between the NotI site and the
oligo-dT track served to identify it as a clone from the normalized
adult 8-Day-Embryo library. cDNA Library Preparation: M. Fatima
Bonaldo, Ph.D. Clone distribution: clones will be available through
Research Genetics This clone is also available through the
I.M.A.G.E. Consortium at LLNL (info@image.llnl.gov). IMAGE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        within the mixture. The subtracted library (UI-R-CO) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-Al and UI-R-El clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-Al and UI-R-El library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-CO library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996).
